

PROJECT DHARMA – DAY 0

Founder's Ledger (Private Draft)

Founder: Paresh Somani

Project Codename: Dharma

Status: Private Founder Documentation

Vision

Build the universal authority protocol for autonomous systems.

Principle 0

Capability does not constitute authority. A machine may be technically capable of performing an action without possessing legitimate authority to perform it.

The Six-Layer Model

Identity – Who are you?

Authority – What may you do?

Intent – Why are you doing it?

Action – What did you request?

Effect – What actually happened?

Evidence – Can it later be proven?

Authority Chain

Human → Agent A → Agent B → Agent C → Action → Effect. Every delegation preserves ancestry and remains bounded by the originating authority.

The First Eight Laws of Dharma

1. Provenance. 2. Delegation. 3. Attenuation. 4. Purpose Binding. 5. Constraints. 6. Revocation. 7. Evidence. (Built upon Principle 0.)

Working Patent Families

DP-001 Authority Lineage Engine

DP-002 Constraint Propagation

DP-003 Intent-to-Effect Verification

DP-004 Cross-Protocol Authority Translation

North Star Question

Does this strengthen the universal authority model, or is it merely another application?
